

The new IBSA Foundation website is now online!

IBSA Foundation has a new look, and the new website has been online for a few days now. Available in English, the new layout offers any and all information, is easy to navigate and comes with modern and captivating graphics, starting with the logo.

Coming in a completely updated new look, the new IBSA Foundation website is simpler and completely usable also on smartphones and tablets, thanks to "responsive" dynamics, with which it was remodeled and developed.

Beyond content reorganization, allowing for mobile access, another important new element is its fast, direct and simple usability. All content has a space in specific areas like Workshops & Events, Scientific Forums, Fellowships and Awards, through which visitors will be guided, in an intuitive way, toward the information of their interest, with access to all multimedia materials: images and video. Headline news have a space in the spotlights while a specific section is dedicated to the history of the Foundation, Mission and Bylaws. Furthermore, in the papers section, visitors will be able to download all publications linked to the scientific forums in order to examine the treated arguments in depth and to make the research results available.

The new IBSA Foundation website represents a meeting point between Foundation, the network of scientific researchers and all those who wish to be updated about activities, present and future.

We wish you happy browsing, in the hopes that you will like our new website! In the next weeks we will launch new content, and the Italian page, so stay tuned!
